About us

Who are we?

Our company which works with the principle of quality, guaranteed work on time, has aimed to be the solution partner of its customers in the sector.

Our company which continues to serve with its 25 years of experience in the sector, has carried out many successful projects.

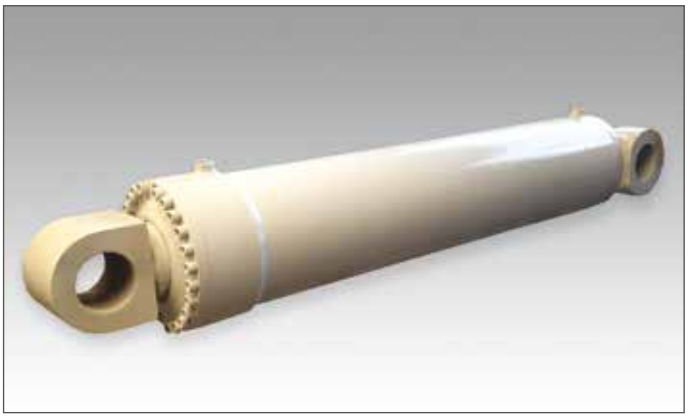
Aiming to keep customer satisfaction at the highest level without compromising quality and technology, aiming to be the preferred and demanded company in hydraulic cylinder and energy sectors with its modern management understanding and experienced staff, KOCALIFT always proceeds by taking firm steps and targeting the best.

Our services;

1. Optional Custom Hydraulic Cylinders
2. Construction Equipment Hydraulic Systems
3. Industrial Hydraulic Cylinders
4. Dam Gate Hydraulic Cylinders
5. Concrete Pumps Hydraulic Systems
6. 700 bar Hydraulic Cylinders
7. Hydraulic Cylinder Repair, Maintenance, Revision
8. Manufacture Of Hydraulic Cylinder For Mining Sector
9. Manufacture Of Hydraulic Press Cylinders

Our industrial and mobile concrete pumps that comply with the required technical specifications and have special design or that are in Cetop standards, are available with technical support. Connection elements connecting the main parts of the concrete pump are heat treated in special furnaces.
Hydraulic cylinders are manufactured and assembled with the same care and then pressure and leakage tests are performed. Quality is our priority target in manufacture of concrete pump hydraulic cylinder.

CONCRETE PUMP CYLINDERS

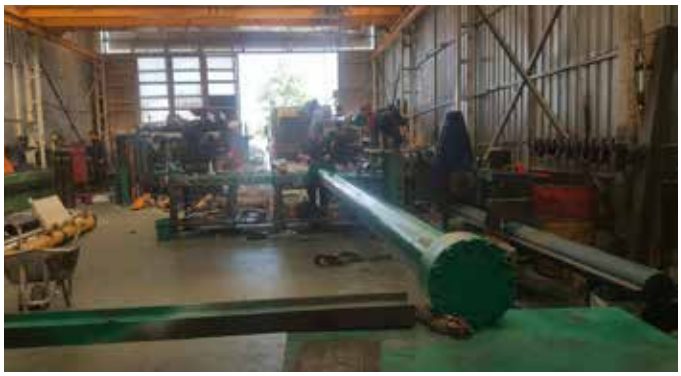


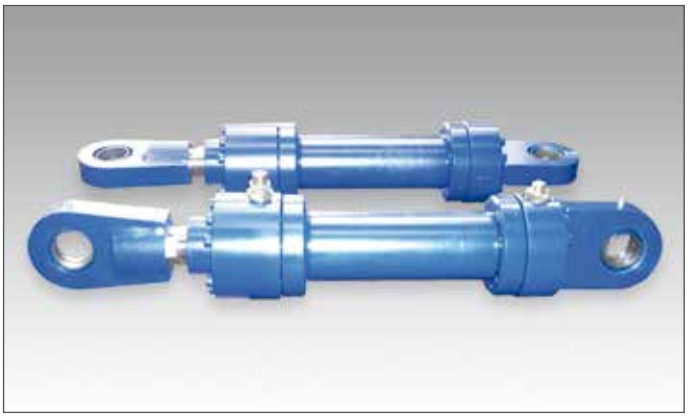
Hydraulic cylinder is designed by the expert staff according to required special or general processes, hydraulic or pneumatic systems, material specifications and in such a way to offer pecifications expected from the cylinder according to request of the customer such as connection distance, connection type, stroke, repulsive force, attraction force. Manufacture is carried out by our expert team for mobile crane cylinders, construction equipment cylinders, agricultural vehicle cylinders, garbage vehicle cylinders, single acting hydraulic cylinders,double acting hydraulic cylinders.

CONSTRUCTION EQUIPMENT HYDRAULIC CYLINDERS

It is manufactured in desired diameter and length in accordance with required technical specifications and according to special design or cetop standards. In addition, manufacture and repair of lift from 20 mm to 1000 mm and manufacture of lift from 10 mm to 6000 mm stroke are carried out. We offer manufacture of dam lift, cylinder suitable for all diameters and seamless flange, joint and barrel connection dam cylinders, welded flange, joint and barrel connection dam cylinders with technical support. Hydraulic cylinders are manufactured and assembled with the same care and then pressure and leakage tests are performed.

DAM GATE HYDRAULIC CYLINDERS

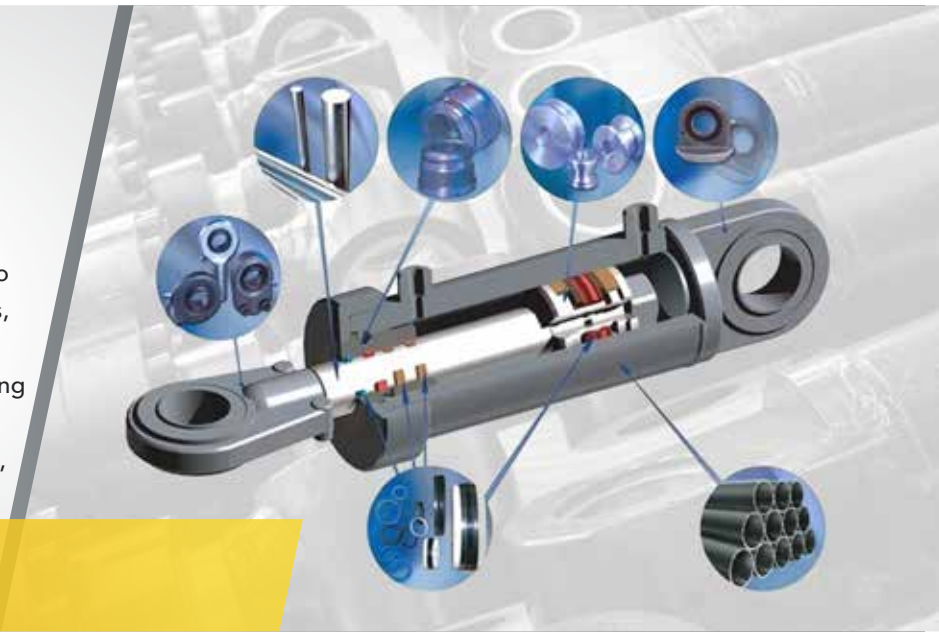




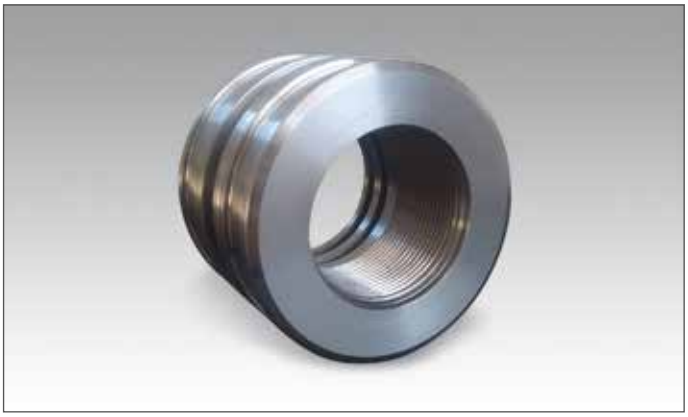
Hydraulic cylinder is designed and manufactured by the expert staff according to required special or general processes, hydraulic or pneumatic systems, material specifications and in such a way to offer specifications expected from the cylinder according to request of the customer such as connection distance, connection type, stroke, repulsive force, attraction force. Our company offers the experience it gained in cylinder manufacturing to all customers who want it as a quality and world class product and it also provides consultancy and technical service support if needed.

OPTIONAL CUSTOM CYLINDERS

We supply and manufacture advanced hydraulic cylinder spare parts used in various industrial applications, spare parts for revision works of construction equipment, concrete pumps, dam gate, custom hydraulic cylinders. Hydraulic equipment and spare parts are made according to different capacity hydraulic or pneumatic systems, material specifications in such a way to offer specifications expected from the cylinder according to request of the customer such as connection distance, connection type, stroke, repulsive force, attraction force.



SPARE PARTS

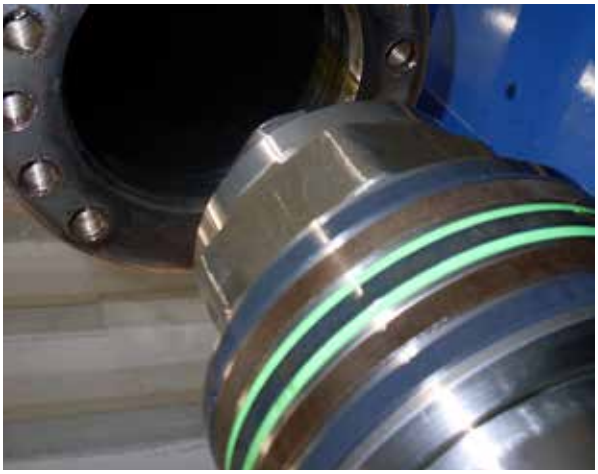


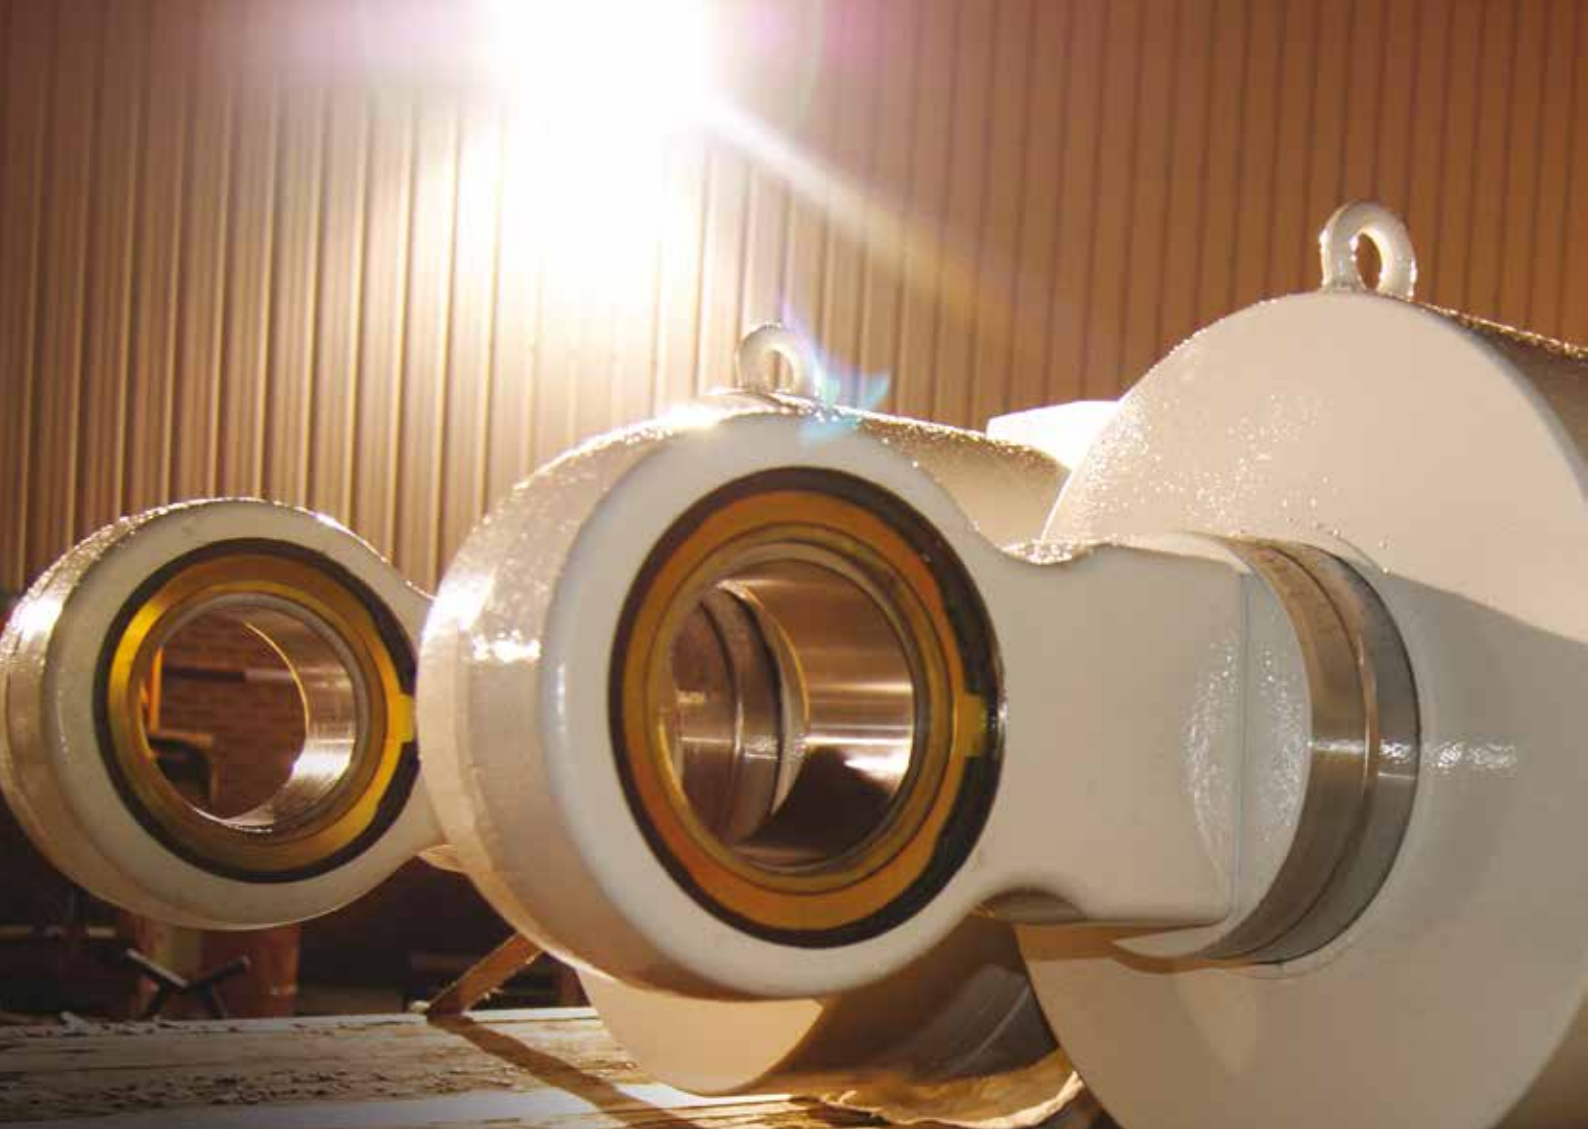
We offer product and system based solutions to needs of hydraulic product working at pressures of 700 bar and more. Our cylinders are designed to be used safely and securely in heavy industry branches such as cement, iron and steel factories, shipyards, in large and heavy duty applications for maintenance applications, test applications, all kinds of load lifting applications in specified tonnages. For your needs other than standard capacity and stroke, custom design and manufacturing are made for you.

700 bar HYDRAULIC CYLINDERS

Kocalift performs repair, maintenance and revision of existing cylinders as well as manufacture of hydraulic cylinder.All revision works of hydraulic cylinders which are defective or in need of renewal are carried out in our structure. Cylinders which come to the service unit are disassembled and all parts are checked, damaged areas are found, revisions are made or new ones are manufactured. After revision, its size is checked, the cylinder is tested and delivered.

REPAIR and REVISION SERVICE





- Optional Custom Hydraulic Cylinders
- Construction Equipment Hydraulic Systems
- Industrial Hydraulic Cylinders
- Dam Gate Hydraulic Cylinders
- Concrete Pumps Hydraulic Systems
- 700 bar Hydraulic Cylinders
- Hydraulic Cylinder Repair, Maintenance, Revision
- Manufacture Of Hydraulic Cylinder For Mining Sector
- Manufacture Of Hydraulic Press Cylinders
